

BIOSYNTHETIC[®]
TECHNOLOGIES

Our Vision

To deliver Innovative Solutions for a Sustainable
Future

Our Mission

To be the Premier Synthetic Base Fluid Supplier
Across a Variety of Specialty Markets

Company Overview

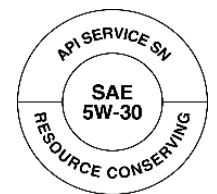

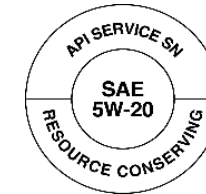

- Biosynthetic Technologies is an innovative US based company
- Biosynthetic Technologies' primary technology is a chemistry called Estolides
- Estolides can be used as the primary base oil of a formulation, a component of a base oil co-blend, or even as an additive
- Estolides are **renewable**, **biodegradable**, **nonbioaccumulative** and **nontoxic**
- Biosynthetic Technologies now uses these oils to formulate and produce performance products

Our Newly Developed Engine Oil

- Approved by the American Petroleum Institute (API)
 - API SN-RC certification on a 5W-20 and 5W-30 motor oil
 - 5W-20 and 5W-30 grades represent 79% of all motor oil sold in the U.S.

- BioPreferred Certified

Motor Oil Benefits

Cleaner Engine

- Far less engine varnish

Longer Engine Life

- Biosynthetic base oils have good oxidative stability
- Reduced wear in engine testing

Environmentally Acceptable

- BioPreferred Certified - 26% renewable content
- 35% of the formulation is made with biodegradable ingredients
- Good phosphorus retention

Biosynthetic Motor Oil Formulations

Biosynthetic Technologies has two API approved formulations

Biosynthetic Motor Oil Formulations

Formulation	Biosynthetic 5W-30	Biosynthetic 5W-20
	<i>mass %</i>	<i>mass %</i>
Viscosity Modifier	3.500	2.000
Cobase Additive (Estolide Based)	48.350	48.350
4 cSt Group III	22.950	48.150
6 cSt Group III	25.200	1.500

Estolides have a high VI and reduce varnish so the use of estolides in a formulation allows for reduced treat rates of some additives that may serve the same function

Co

Oil

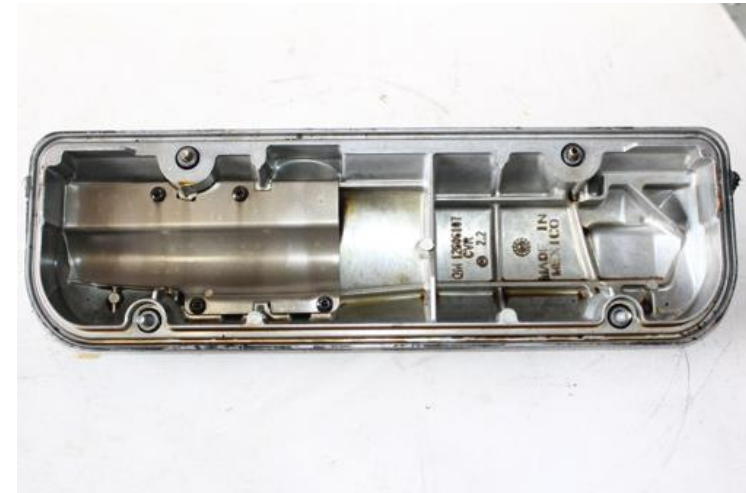

And Yes, We Tested it! - Field Trial Details

- 150,000 mile (241,402 km) taxi cab field trial under severe stop and go conditions in Las Vegas Nevada, USA.
- Reference Oil - Minimum Quality GF-5 oil.
- Typical drain interval 2 to 3 times recommended mileage.
- Vehicle - Taxi Cab, Chevy Impala, 3.5 liter V6.
- *Conclusion: Engines running on Estolide-based formulations had far less varnish.*

The background of the slide is a dynamic, abstract splash of golden-yellow liquid. The liquid forms elegant, flowing ribbons and droplets of various sizes, creating a sense of movement and energy. The lighting highlights the glossy, reflective surfaces of the liquid, with bright highlights and soft shadows. The overall composition is clean and modern, with the liquid elements set against a plain white background.
