

## Government Printing Office Roof Goes Green

The Government Printing Office (GPO) has piloted a new soy biobased green roof system on one of its headquarters buildings in Washington, D.C. Installed in fall 2008, the GPO expects the roof will double the typical life expectancy of a new roof. Based on the success of the pilot, the GPO hopes to replace its entire roof with this type of application that you can learn more about at the GPO's Sustainable Environmental Stewardship video on [YouTube](#)..
